

Teachers can work with students to SAVE THE FROGS!

Frogs are rapidly disappearing. One-third of the world's 6,485 amphibian species are on the verge of extinction. In the past 30 years, 200 amphibian species have gone extinct due to human activity. This means frogs and other amphibians are the most threatened group of animals on the planet!

SAVE THE FROGS! is a nonprofit organization dedicated to amphibian conservation. Help support our mission to protect amphibian populations and to create a society that respects and appreciates wildlife and nature.

SAVE THE FROGS! Day is April 30th 2010. Please hold discussions, and/or plan activities that enhance students' appreciation of frogs, and their understanding of how their actions can have a direct positive effect on the environment! Get your class involved in the **SAVE THE FROGS! Poetry, Art or Essay Contests**:

Environmental education is an integral part of any student's educational development. Schools must help to instill a love and knowledge of the environment in their students, and this begins at an early age.
